

# Salma Ahmed

Chigwell, Greater London · 07344 777175 · s.ahmed124@hotmail.com

## PROFILE

A final-year Software Engineering with Electronics student who enjoys taking projects from concept through to deployment, from a full-stack app shipped at a Women in Tech hackathons to academic work in AI fairness and autonomous robotics. I work comfortably across C, C++, and Python, and I've learned to handle pressure well, having balanced a demanding part-time role with full-time study throughout my degree. While new to finance specifically, I'm motivated to apply my data science skills in a fast-paced, real-world setting, and keen to build domain knowledge in financial markets quickly.

## TECHNICAL PROJECTS

### HuddleHive Women in Tech Hackathon — MasonBee — Sustainable Home Renovation Assistant *London | 2026*

- Built and deployed a full-stack web application (React, TypeScript, Tailwind CSS, Gemini API) helping UK first-time buyers assess sustainable renovation options, live via GitHub Pages.
- Worked in a small team under hackathon time pressure, integrating an LLM API into a production-style front end and shipping a working demo.

### AI Bias Mitigation & Model Evaluation — Femetronics ML F1 Flux

*University project | 2025-2026*

- Built and evaluated a Decision Tree regression model predicting Formula 1 pit-stop lap-time variation, using Mean Absolute Error to assess fairness across teams.
- Designed and implemented a disaggregation-based mitigation strategy that measurably reduced predictive bias between high- and low-resource teams.

### Work-Based Embedded Systems Project — Micro-Mouse Robot

*University project | 2025-2026*

- Collaborated in a multi-disciplinary team to design, build, test and validate an autonomous robot against a client-style design brief.
- Led project planning and risk assessment (power, sensor reliability, £150 cost cap) and produced technical documentation for stakeholder review.

## EXPERIENCE

### Receptionist, Front of House — Estates Planning & Services

*London | May 2026 – Present*

- Deliver front-of-house service across a high-footfall estate, engaging daily with staff and visitors from a wide range of backgrounds while processing access requests and issuing/tracking ID cards, maintaining accurate and confidential security records.
- Log and resolve day-to-day operational tasks and coordinate post, deliveries and room bookings, balancing ~20 hrs/week alongside full-time study.

### Tutor, Supervisor — Best Tutors

*London | Jan 2022 – May 2024*

- Maintained accurate learner records and tracked performance data across multiple students, informing tailored lesson planning, while managing scheduling and admin for several learners simultaneously.

## SKILLS

**Programming:** Python · SQL (basic) · R (basic) · C++ · C · MATLAB · Unix/Linux · Git

**Data & Analytics:** Project Planning · Data Analysis · Metrics & Reporting · Risk Awareness

**Professional:** Written & Verbal Communication · Organisation · Collaboration · Adaptability · Time Management

## ACHIEVEMENTS & ACTIVITIES

Silver & Bronze Westminster Employability Awards · Women in STEM Society (Active member) · Femetronics Society (Active member)

## EDUCATION

Bachelor of Engineering (Hons), Software Engineering with Electronics — University of Westminster, London | 09/2024 – Expected 06/2027
